Great news is here

Toby Halvorson to u76t-setproduct@in.mailshrimp... 2 hours

Hi there,

I'm so glad you decided to try Material Desktop system!

Material Desktop design system for Figma is equipped with a bundle of high quality application templates. With this You now able to accelerate your design & development process by up to fourty percents. Each template made from components, scalable and properly constrained. Fits for both of purposes for desktop or web progressive applications.

Have fun!

Toby (CTO at Setproduct)

Line extracted from text not matching the content of the text array

Ask Question

Asked today Modified today Viewed 21 times

I have this block of code:

1

```
def removal(i):
    with open(r"D:\Largecodefile\Customer.txt", "r") as f:
        lines = f.readlines()
    h,j = i-2,i-1
    data1, data2 = lines[h],lines[j]
    print('data is ',data1,'and',data2)
    print('line is ',lines)
    with open(r"D:\Largecodefile\Customer.txt", "w") as f:
        for line in lines:
            if line.strip('\n') != data1 and data2:
                f.write(line)
```

I'm trying to make it rewrite the file and exclude the specific line that I choose. As of right now, my line output is:

```
line is ['JSJSJSJSJS\n', '10-02-1975\n', 'HAHAHAHAHA\n', '26-11-2001\n', 'BOTBOITE
```

and data1 and data 2 is:

```
data is Phill\n and Gill
```

They seem matchup to the list from I what see, however, the system is not recognizing it, I think the problem is at the second last line of the code but I can't make it work. Is it that I went wrong somewhere? Thank you!

Edit: Hi, it's me again, I just want to add that I've tried using 1 data to excluded it too and see if it works, `if line.strip('\n') != data1:` but sadly the result is still the same, I tried removing `\n` either, not reccomeded but I did it anyway, does not get affected too

python text readfile
